ICP2

Introduction,HTML and CSS

Introduction:
Github is the main source for tech developers as it is open source and it contributed a lot to the development of different platforms.
VScode which everyone is using these days is one of such creation from so many developers solving bugs everyday
Python ,which has the most no of responses in github is widely used around the world.
The main challenge every developer faces is version control and open source availability.anyone from anywhere can fork,create issue,make a change using the internet from github.
Almost all of the technology solutions related platforms use github

Tasks:
* created new HTML document named "index.html" and pushed it to remote repo
* wrote about the ICP2 report in the wiki file
* took screenshots and uploaded it to the github and described as well
* Created different elements using HTML,css styling functions such as paragraphs,headings,ol,ul
* saved the file and pushed it to remote repository for version control
* similarly used img and iframe elements for displaying clickable image and video in the index.html file and pushed it to remote repository

Contributions:

Only myself

Conclusion:
I learned a lot from this ICP2 about different elements and styling functions available in html,
I want to thank professor for the detailed explanation and helping students solve their queries regarding the subject.
